PROFESSIONAL SUMMARY

Data Science M.S. student who builds and ships AI tools into real workflows with the Claude API, Python, React, and PostgreSQL. Built an AI help desk used by 25+ employees (84% of AI suggestions accepted), plus AI agents tested with guardrails and evals.

EDUCATION

Master of Science in Data Science | *Montclair State University, Montclair, NJ* **Expected May 2028**
GPA: 3.5 / 4.0 • Relevant Coursework: Data Mining, Database Systems

B.S. in Computer Science, Minor in Mathematics | *Fairleigh Dickinson University, Teaneck, NJ* **May 2026**
GPA: 3.2 / 4.0 • Dean's List • Partial Academic Scholarship

EXPERIENCE

E-PARALEGALS LLC **Oradell, NJ**
Systems Administrator & AI Developer **Jan 2022 – Present**

- Designed, built, and deployed an AI help desk platform (React, Python, PostgreSQL, Microsoft Azure) with Microsoft Entra ID single sign-on, used by 25+ employees for ticket tracking, prioritization, and asset management
- Integrated the Anthropic Claude API to classify tickets by category and priority and suggest troubleshooting steps; the IT team accepted 84% of AI suggestions across 180 tickets
- Deployed an AI support assistant grounded in approved internal documentation that answered 311 employee questions, resolving 35% without a ticket, with access controls keeping confidential client and immigration case records out of scope
- Automated ticket routing, acknowledgment and resolution emails, and overdue escalation; used Power BI to pinpoint slow assignment and cut average assignment time 30% (from 10 to 7 hours)
- Built the platform with Claude Code and Cursor, using MCP servers to connect the agents to our PostgreSQL database, then reviewed and debugged the generated code
- Research and evaluate AI tools and software, present all IT projects and live demos to the company, and train staff on new tools

SELF-EMPLOYED **Oradell, NJ**
Freelance Web Developer **Jun 2022 – Present**

- Developed responsive websites and web apps for 7 clients using React, JavaScript, HTML, and CSS, with REST API integrations
- Built client analytics tools in Python, pandas, and SQL, including e-commerce revenue and conversion dashboards
- Mapped client workflows in Visio diagrams to make sure each site's admin side had the functions the business needed

PROJECTS

TaskFlow AI: AI Operations Command Center | *Python, Flask, SQLite, Anthropic Claude API, Pydantic, JavaScript* **Live Demo** | **GitHub**

- Built and deployed a full-stack LLM operations platform with human-in-the-loop design: the model only suggests, while business rules and a human approval queue make every change, logged in an append-only audit trail enforced by database triggers
- Engineered LLM guardrails: strict JSON-schema outputs validated with Pydantic, a tool-calling copilot limited to 10 read-only parameterized SQL queries, and grounding checks that withhold answers not backed by retrieved data
- Built an evaluation lab benchmarking the model on 40 labeled test cases, improving customer-intent classification accuracy from 69% to 82% across runs (88% information detection) at $0.0066 per analysis, with regression tracking

Triage Desk: Telehealth Message Triage Agent | *PHP, Laravel, SQLite, Anthropic Claude API, Docker, Render* **Live Demo** | **GitHub**

- Learned Laravel and shipped a deployed AI triage agent in under a week with Claude Code, with staff approving every AI draft
- Built the SQLite database with Laravel migrations and Eloquent models for messages, AI triage results, and staff approvals
- Tested before launch with 389 automated tests, a 38-case evaluation, and 9 prompt-injection attacks; the first evaluation exposed a 67% emergency recall gap, which I fixed to 7/7

ARTIFICIAL INTELLIGENCE (CSCI 3385), FAIRLEIGH DICKINSON UNIVERSITY
AI Research Paper: Human Identification Through Walking Patterns

- Independently researched whether AI can identify people by gait when clothing, footwear, or walking speed changes, writing a literature review comparing skeleton-based and silhouette-based recognition

SKILLS

AI & LLM Engineering:	Claude API, Claude Code, Cursor, MCP servers, tool-calling agents, structured outputs, LLM evals
Languages & Frameworks:	Python, SQL, JavaScript, PHP, Next.js, React, Flask, Laravel, Streamlit, REST APIs, HTML/CSS
Cloud & Tools:	Microsoft Azure, Entra ID, Docker, Render, Git, GitHub, pytest, Notion, Visio, ChatGPT, Gemini
Data & Databases:	PostgreSQL, SQLite, SQL Server, pandas, NumPy, Power BI
Spoken Languages:	English (native), Spanish (conversational)
